

### Sample Brief Course Description

<b>Course title</b>	Biomedical Digital Image Processing
<b>Course code</b>	BME 342
<b>College</b>	Engineering
<b>Department / Program</b>	Biomedical Engineering
<b>Year/ Level</b>	4/8
<b>Course Type</b>	A. <input type="checkbox"/> University <input type="checkbox"/> College <input checked="" type="checkbox"/> Department <input type="checkbox"/> Others b. <input checked="" type="checkbox"/> Required <input type="checkbox"/> Elective
<b>Credited Hours</b>	3
<b>Contact Hours</b>	(LT: 2, LB: 2, TR: 0)
<b>Pre-requisites (if any)</b>	--
<b>Co-requisites (if any)</b>	---
<b>Course description</b>	Topics include: Digital image fundamentals: Introduction – Origin – Steps in Digital Image Processing – Components –Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization –Relationships between pixels - color models. Biomedical Image enhancement: Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering–Smoothing and Sharpening Spatial Filtering – Frequency Domain: Introduction to Fourier Transform– Smoothing and Sharpening frequency domain

	<p>filters – Ideal, Butterworth and Gaussian filters. Biomedical Image restoration and segmentation: Noise models – Mean Filters – Order Statistics – Adaptive filters– Band reject Filters – Band pass Filters – Notch Filters – Optimum Notch Filtering – Inverse Filtering – Wiener filtering Segmentation: Detection of Discontinuities–Edge Linking and Boundary detection – Region based segmentation- Morphological processing- erosion and dilation. Wavelets and image compression: Wavelets – Subband coding - Multiresolution expansions- Compression: Fundamentals – Image Compression models – Error Free Compression – Variable Length Coding –Bit-Plane Coding – Lossless Predictive Coding – Lossy Compression – Lossy Predictive Coding – Compression Standards. Image representation and recognition: Boundary representation – Chain Code – Polygonal approximation, signature, boundary segments – Boundary description – Shape number – Fourier Descriptor, moments- Regional Descriptors – Topological feature, Texture - Patterns and Pattern classes - Recognition based on matching.</p>
<p><b>Course Main Objectives</b></p>	<ol style="list-style-type: none"> <li>1. Learn digital image fundamentals.</li> <li>2. Be exposed to simple image processing techniques.</li> <li>3. Be familiar with image compression and segmentation techniques.</li> <li>4. Understand the potential of computers on medical images.</li> </ol>
<p><b>Learning Outcomes</b></p>	<p>Knowledge and Understanding:</p> <ol style="list-style-type: none"> <li>1. Describe various concepts of digital image processing</li> <li>2. Select suitable technique for accomplishing specific image processing task.</li> <li>3. Illustrate the steps involved in processing digital images.</li> </ol> <p>Skills:---</p> <ol style="list-style-type: none"> <li>1. Analyze the performance of image processing techniques</li> <li>2. Devise new ideas or tools to solve common issues in certain applications.</li> <li>3. Assess the impact of digital image processing for medical applications.</li> </ol> <p>Values:---</p> <ol style="list-style-type: none"> <li>1. Communicate effectively on a team.</li> </ol>
